

Better healthcare, one step at a time.

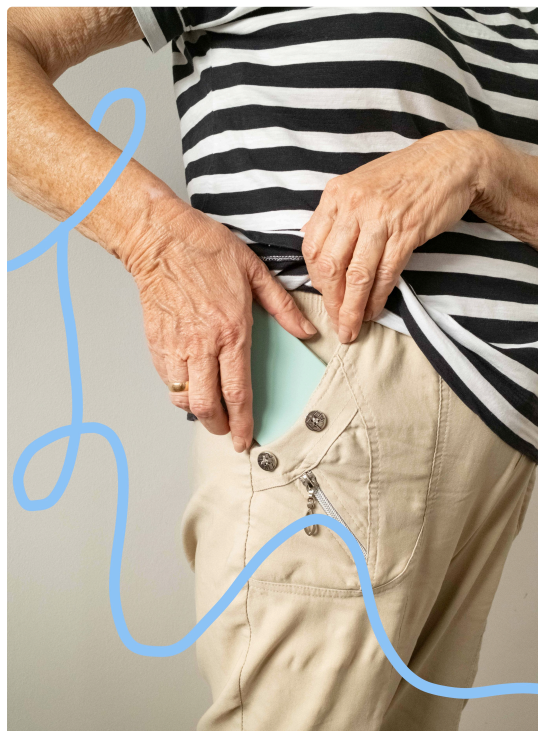

1 in 4 people has movement-related health issues — from joint injuries to falls to neurological conditions, and even cancer.

We believe that what gets measured gets improved. That's why we made gait measurement as easy as stepping on a scale and as insightful as a blood test - all from a smartphone.

Successfully
deployed against

- Fall prevention
- Cognitive decline
- Surgical outcomes
- Orthotics and prosthetics
- Medical device efficacy

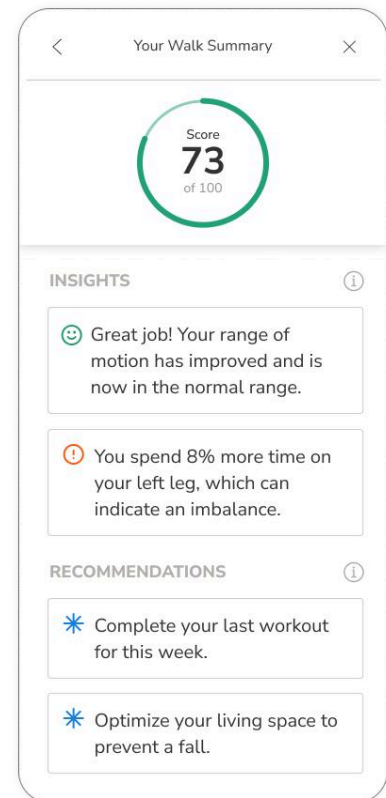

How it works

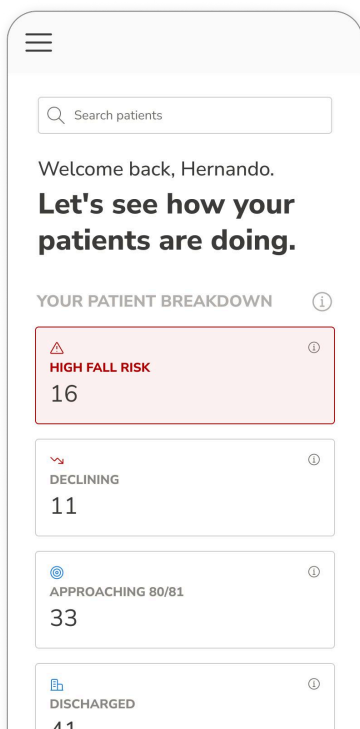

1. Place the phone in your patient's pocket and record an activity.
2. Gets instant clinical-grade gait and mobility analysis on your device.
3. Get AI-powered clinical insights and intervention opportunities.
4. Document everything with a click using our smart documentation tools.

Our impact

- Better patient outcomes with objective data across a variety of clinical use cases
- 45% higher patient engagement and 4x higher retention in care programs
- 5x faster documentation with our advanced automated reporting tools
- 11x financial returns through referral and reimbursement opportunities benefiting payors, providers, and patients alike
