Know more. Worry Less.™

The Nomo Smart Care™ system helps loved ones stay independent in the home they love.

Our privacy-first technology uses discreet motion and movement sensors, never cameras, to quietly support their daily routine and alerts you only if something seems off, like a missed medication or getting up multiple times during the night.

*Fall detection may not detect 100% of falls. Always press the button if help is needed.

How it works

The Nomo Smart Care system uses small, discreet sensors placed in key areas of the home, like the refrigerator, bathroom, bedroom, front door, or medicine cabinet.

The system quietly looks out for changes in activity and sends an alert to family or caregivers if something seems unusual.

They don't have to wear anything, press anything, or do anything differently.

Nomo Hub

INCLUDES (1)
